Gaggle is all about student safety. For more than 15 years, we've been working with schools and districts to create safe digital learning environments. We provide early warning detection of self-harm, drug or alcohol use, cyberbullying, pornography, harmful family situations and much more that is found in email, files shared in Google Drive and Microsoft OneDrive, links, attachments and other online tools. We do this by combining technology with our expert Safety Representatives who review content 24/7 to ensure students are safe.

Gaggle is proud to be the first line of defense for your school's online safety, but can't do it alone. Once Gaggle has identified inappropriate or dangerous behavior, it is up to your district's personnel to address the issues. For most districts, this means following your standard protocols for discipline and intervention. Therefore, it's important that your designated Emergency Contacts are comfortable with district policies and aware of the procedures Gaggle uses to determine how various situations are handled.

In some cases, the notifications you receive can lead you to further investigation, including accessing student Gaggle accounts to view messages and activity, so your main Gaggle Administrator will be a valuable resource for your district. Gaggle's Safety Representatives and Customer Support are also available to assist should you need further information or assistance with an investigation.
